
Micro Optics/Lens Arrays

OPTIKRON GmbH, a company founded in the technology region of Jena, it is a manufacturer of micro-optical components and micro-optical subsystems for laser systems, endoscopes, sensor systems, measuring instruments and optical data transmission.

The Products are used in medical as well as technical applications. Optikron has made it there task to actively contribute to the miniaturization of optical components and supporting powerful applications by fabricating miniature components of supreme precision in a wide variety tailored to customers needs.

Optical components are available from 0.3mm and up to a few millimeters. Lens groups and lens arrays are also available.
